

# It's tough at the top

*Mitre housing with integral wiper and infra red lamps, mounted on Topper pan & tilt. Razor wire optional.*

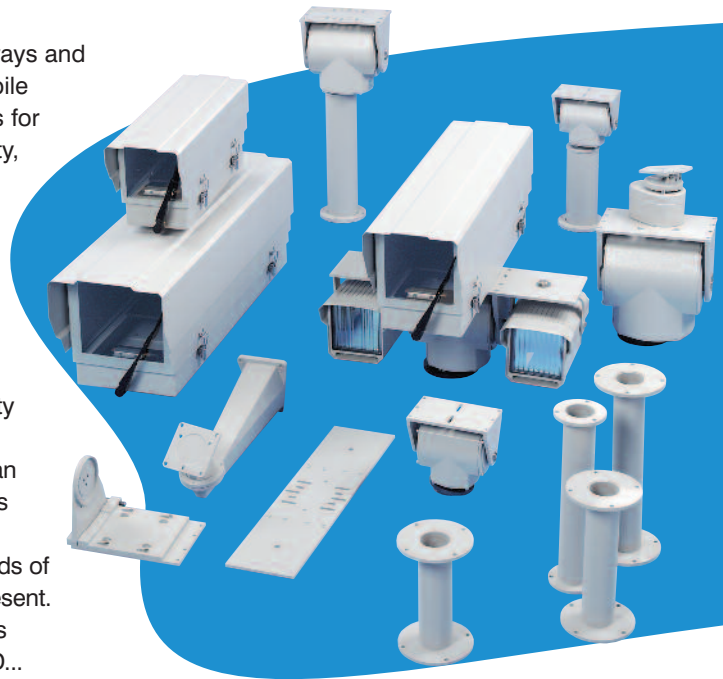

On a prison wall looking in, or a power station looking out; on highways and traffic management projects; in town and city centres; on police mobile surveillance units and for ANPR... In fact on any application that calls for uncompromising quality, performance and maintenance-free reliability, chances are you'll spot the unmistakable profile of a MAD pan & tilt. Available in three sizes, from the mighty Homburg, capable of supporting 45kg over the top and a staggering 50kg side-mounted, to the standard Topper, to the miniature Bowler, each model has a continuous rotation option and is available with traditional style housings and accessories to match.

Unique in the industry, we design, manufacture and assemble under one roof, which enables us to provide unprecedented levels of flexibility and support, whilst at the same time keeping prices down.

As if all this were not enough, we now offer two specialist ranges of pan & tilt heads, housings and accessories. The all stainless steel NX series provides optimum protection in highly corrosive environments, and the

ATEX certified, explosion proof EX series meets the demands of areas where flammable gases may be present.

If you're making tough decisions, there's never been a better time to go MAD...

Don't get even. Get MAD
